

CYBER ONE

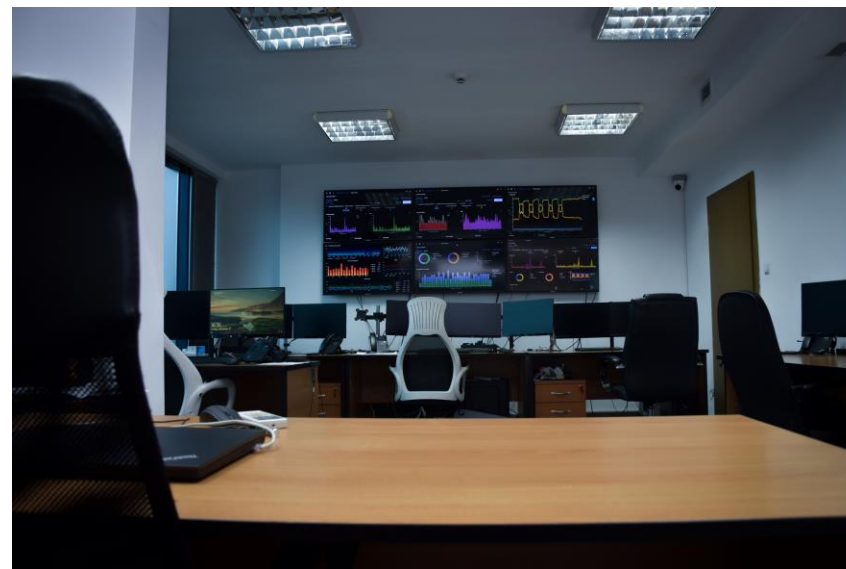

Cybersecurity Solutions

More information about us

CYBER ONE

CYBERONE is a company founded by Israeli and Bulgarian cybersecurity specialists in 2018. The company provide Israeli know-how and variety of technological solutions related to cybersecurity and information technology. The main priority of the company is the successful and effective provision of cybersecurity solutions to businesses in Europe.

Since 2019 the company established their own advanced Security Operation Center in Sofia, Bulgaria. Together with our partners we strive to provide quality cybersecurity and IT services. In addition, we provide complete software and hardware solutions for Cybersecurity and data protection.

How can we protect you?

CYBER ONE

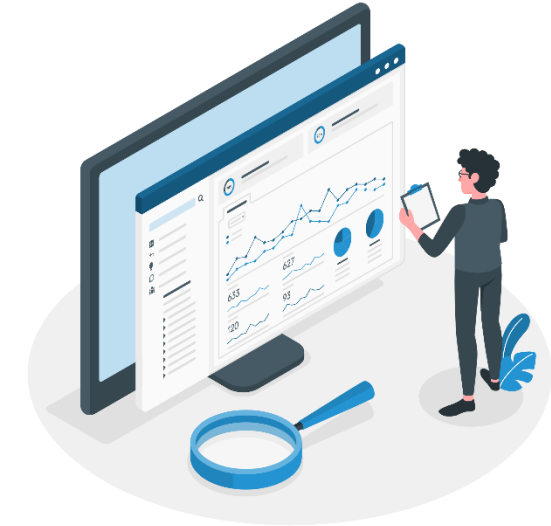

Passive protection

Implementation of mechanisms for passive control and protection of IT infrastructure

Proactive protection

Providing regular penetration tests and vulnerabilities scan

Monitoring

Implementation of innovative solutions for monitoring servers, workstations and networks

Our cyber security consultancy services are provided by a team of highly certified consultants, with a deep understanding of the range of cyber risks facing organisations nowadays, assisting your business with implementing the best possible cyber security controls and tools for your budget and requirements. With growing risks of cyber attacks and data breaches, it is important to know your business has the right cyber defence in place to reduce the risk of becoming a target. Our cyber security consultancy practice provides a range of services to measure, manage and control Cyber Risk within your organization. With a dedicated team of highly certified Cyber Security Consultants, we work with your business to identify key business assets and risks of cyber attacks or data breach from a range of threats, problems with your current IT infrastructure, procedures etc.

Risk assessments

Operationalizing cyber security

Training and awareness

Cyber security roadmap

Cyber security governance

1. Product specific security consultants

The objective of providing consulting services for specific IT/security software product is to better understand the capabilities and functionalities of it. Another reason why you would need such service is because you want to implement or onboard such service but you lack the knowledge and experience. Some of the software/services we are keen on:

- Firewalls
- IDS / IPS software
- SIEM implementation and customization
- Endpoint protection and antivirus solutions
- RMM software and inventory software
- Security Email Gateway and Email Security
- Web Application Firewall (WAF)

3. Cybersecurity governance & strategy

Our team will be tasked with preparing a full robust strategy for the security of your company as well as other mandatory documents such as procedures, methodology, policies. This service is quite flexible and all the activities are based on the customer's business need and wish.

2. Digital forensics and investigation

The digital forensics service offers a comprehensive approach to the investigation of a security breach. In case of such, our team can help your business by identifying the source of unauthorized access and provide the best approach to enhance your security posture based on the specifics of the incident. Apart from information related to the event itself, our experts can come up with an estimate for the volume of data that had been compromised.

4. Risk assessments

CYBERONE can perform a full cyber security risk assessment on your company, based on hundreds of risk factors, questions, checks and other activities performed by our team. We can also perform risk assessment based on the public attack surface of your company.

5. Incident response management

Your company can entrust CYBERONE for completely managing and supporting your Incident response team. We can provision full support in case of cyber security incident or any cyber related issue based on an SLA and 24/7 ability to react.

Our business is to protect yours.

CYBER ONE

We take an impartial look at operations, benchmarking your environment with comparable organizations and situations. From security program design through audit preparation, our clients benefit from insight gleaned from our unique vantage point. Blending business acumen with cyber security expertise, we can step in to consult on vendor risk management, business continuity planning, technical security controls, vulnerability management, web application security, and compliance matters.

We also conduct penetration testing and forensic investigation, with cyber security project managers at hand to plan, orchestrate, and execute major undertakings and ensure an optimal ROI.

And our clients gain all of this on an on-demand, part-time, or full-time basis. This reduces the likelihood of data breaches for those that we provide security solutions for.
